

BUG – Login API returns 400 Bad Request for invalid credentials

Bug ID: API-BUG-01 **Module:** Authentication **Endpoint:** POST /https://reqres.in/api/login
Severity: Medium **Priority:** Medium

Description: When incorrect or incomplete login details are sent, the API returns **400 Bad Request** with the message *"Missing email or username"*. The error message is correct, but the API does not clearly differentiate between missing fields and invalid credentials.

Steps to Reproduce:

1. Open Postman
2. Select **POST /https://reqres.in/api/login**
3. Use the following request body:

Code

```
{  
  "email": "wrong@test.com",  
  "password": "wrongpass"  
}
```

4. Click **Send**

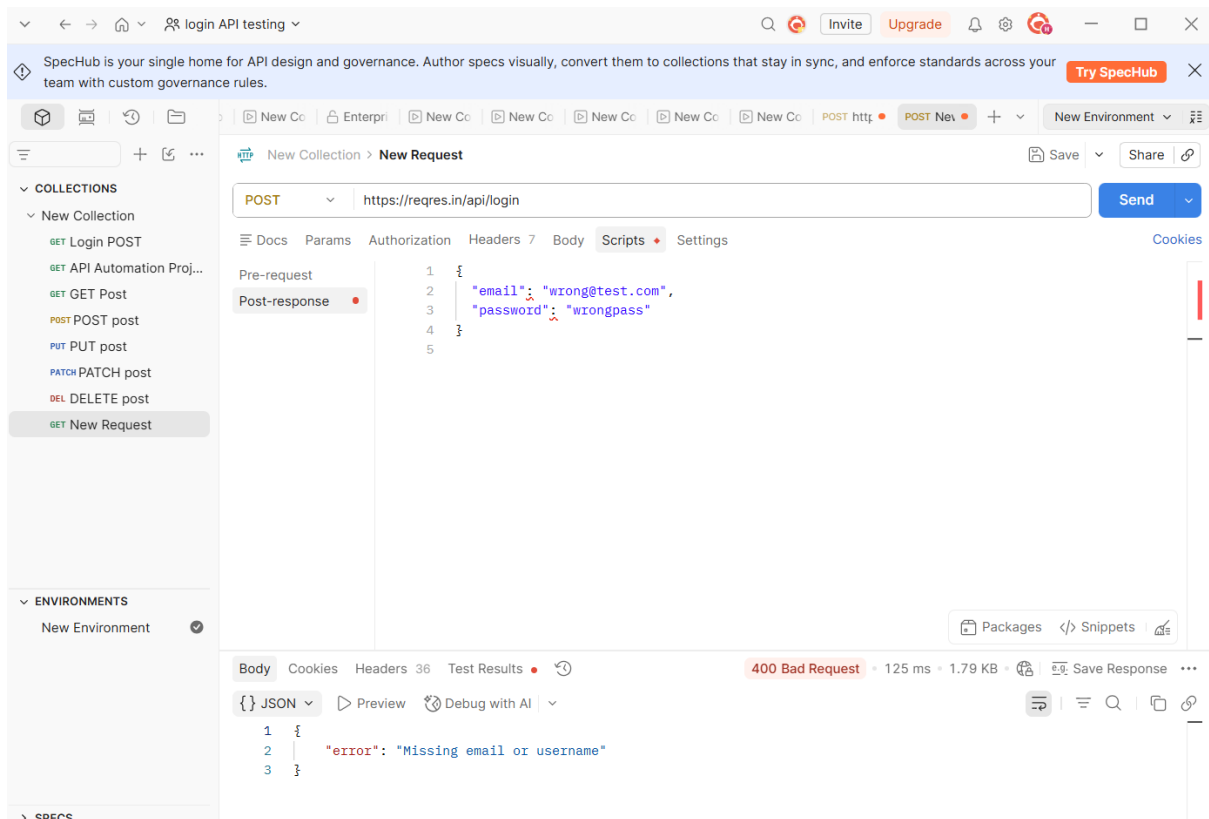

Expected Result: API should return: 401 Unauthorized with message: *Invalid email or password*

Actual Result: API returns: 400 Bad Request with message:

Code

```
{  
  "error": "Missing email or username"  
}
```

BUG – API accepts invalid product ID and returns 201 Created

Bug ID: API-BUG-02 **Module:** Cart / Product **Endpoint:** POST
/https://jsonplaceholder.typicode.com/posts **Severity:** High **Priority:** High

Description: When an invalid product ID is sent in the request body, the API still returns **201 Created** and creates a new record. The API does not validate whether the product ID exists.

Steps to Reproduce:

1. Open Postman
2. Select the POST request
3. Use the following body:

Code

```
{  
  
  "product_id": 9999,  
  
  "quantity": 1  
}
```

4. Click **Send**

Expected Result: API should return: 404 Product Not Found or 400 Invalid Product ID

Actual Result: API returns: 201 Created with response:

Code

```
{  
  "id": 101  
}
```
